Integration

Chengdu International Railway Port Investment Development Co., Ltd

Chongqing Logistics Port Platform Company
Expand the scope of freight sources

By taking advantage of our transport capacity, freight rates, and corridors, we have opened 11 railway container trains connecting riverside or coastal cities such as Shanghai and Guangzhou to expand the freight source scope of China-Europe Trains to the Yangtze River Delta, Circum-Bohai-Sea Region, Hong Kong, Macao and Taiwan of China.
Promote opening-up to the outside world

We have accelerated the development of port industry and inland free trade ports and enhanced the functions of the inland railway ports. By now, four types of national ports have been approved such as the national open port and the import and export port of finished automobile. Currently, we are building the designated fruit and grain import port. It is planned to build European industrial cluster zones mainly for smart manufacturing and export processing and trade in Chengdu and Chongqing to push ahead with the international economic and trade exchanges in the next 3-5 years.
Improve the freight transport capacity

We have built Chengdu International Railway Port into an inland railway hub with an annual container throughput ranking among the top in China, put more new-type reefer containers and JSQ special vehicles for commodity vehicle transportation in service, speeded up research and development of logistics port application platform and smart equipment, etc. to build a powerful freight transport hub with access around the globe featuring the close linkage between China and other countries.
Interconnection

The second is to build a broad channel, promoting the interconnection of international freight.
Build a broad channel, promoting the interconnection of international freight

With Western China as the basis and the global economy and trade as the service target, we take Chengdu and Chongqing as the main hubs to accelerate the formation of an all-round and round-the-clock Logistics Corridor between Europe and China.
The theme is to promote large-scale integration and achieve win-win and sharing in multimodal transportation.
